Bài 1:

```
public class Circle {
  private double Radius
  private String radius;

  public circle () {
   this. Radus = Radius;
  this. color = "red";
  }
   public Static (double Radius)
   this . Radius = radius;
   this . color = "red";
   }
   public circle (double Radius)
   this. Radus = Radius;
   this. color = color;
```

TTBOOK

```
}
public double getRadius() {
        return Radius;
}
public void get Radius (double
                        Radius
{
  this. Radius = Radius;
}
public String getRadius () {
    return color ;
}
public void setcolor(string color) {
  this. color = color ;
}
public double setArea () {
    return this. radius * this radi
* math PI ;
}
public String toString () {
    return "radius " + this. Radius =
```

Bài 3: Triển khai class Employee theo diagram

Bài 2:

```
public class ~~retangle~~ Rectangle {
 private int length
 private int width
}
public Rectangle() {
 this. length = {};
 this. width = {};
}
public Rectangle(length : int, width : int)
 {
 this. length = length;
 this. width = width;
}
public setlength (length : int) {
 this. length = length;
}
public void setlength () {
 this. length;
}
public void setwidth (int width)
```

TTBOOK

```
{
 this width = width;
}
 public int setwidth ){
 this. width;
}
 public int getarea ()
 {
   return length * width;
 public String to String (){
  return "length" + this. length + "with" +
this. width
}
```

~~package~~

Bài 4: Thiết kế class Acount theo diagram

Bài 5: Thiết kế class Date theo diagram

Bài 3:

```
public class Employee {
  private int id
  private String firstName ;
  private String lastName ;
  private int Salary ;
}
public employee (int id; String firstName)
                , String lastName , int Sting)
                                        {

this.id = id;
this. firstName = firstName;
this. lastName = lastName ;
this Salary = Salary;
public int getid(){
  return this.id;
}
public String getfirstName (){
  return this. firstName;
}
public String getlastName () {
```

```
    return this. lastName;
}
    public String getFullName (){
return = lastname + firstname;
}
public int get Salary () {
    return this Salary;
}
public void get Salary (int salary) {
    this. salary = salary;
}
public int get AnnualSilary () {
    return Salary* 12;
}
public int upto Salary (int percent) {
return = Salary + (Salary * percent) \100;
}
public String to String () {
return "id" this. id + "getFullName".
    + "Salary". this salary ;
}
```
